TOLULOPE JOSHUA AKINNIYI

BACKEND ENGINEER | NODE.JS · TYPESCRIPT · APIs · INTEGRATIONS

Lagos, Nigeria · +234 816 748 3339 · akinniyitolulopejoshua@gmail.com

PROFESSIONAL SUMMARY

Backend-focused software engineer with 5 years of experience building server-side applications, REST APIs, payment integrations and multi-tenant platforms. Currently Lead Engineer on a healthcare care-management platform and Backend Engineer on a Nigerian fintech and tax-compliance product. Experienced in Node.js, TypeScript, Express, MongoDB and SQL, with additional experience in React, Laravel, Docker and AWS/VPS deployments. Skilled at leading small engineering teams, integrating third-party services, protecting sensitive data and turning stakeholder requirements into reliable software.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Go, PHP
Backend: Node.js, Express.js, Laravel, REST APIs, webhooks, API authentication
Frontend: React, Next.js, React Native, Redux, Zustand, HTML, CSS, Tailwind CSS
Databases: MongoDB, Mongoose, SQL
Integrations: Payment gateways, investment APIs, accounting integrations, OAuth 2.0
Infrastructure: Docker, AWS, VPS, Linux, PM2, Git, Bitbucket
Other: Technical leadership, automated testing, API documentation, database optimisation, security auditing, data encryption

PROFESSIONAL EXPERIENCE

TPay (TaxTech / TaxITPay) — Backend Engineer (Full-Stack)

January 2026 – Present | Lagos, Nigeria

- Designed and developed an FIRS e-invoicing pipeline connecting Zoho Books and QuickBooks, normalising invoice data, mapping it to the required FIRS structure, validating records and supporting transmission and incremental synchronisation.
- Integrated payment and investment services including Nomba, Monnify, Remita, Cowrywise and Penpay/Pencco, implementing service workflows, webhook handling and transaction reconciliation.
- Implemented Cowrywise investment workflows covering account registration, KYC, flexible and locked savings, mutual funds and withdrawals.
- Developed a partner-facing tax-filing API for an external payroll/HR platform, including API-key authentication, PAYE schedules, fee computation and webhook callbacks.
- Corrected transaction reversal and refund logic to prevent refunds from being triggered without required verification; improved Zoho OAuth 2.0 token handling.
- Implemented security audit logging for password/PIN reset activities and developed a mock webhook service for payment-integration testing.
- Supported production deployments and maintenance on Ubuntu/DigitalOcean using PM2 and Git/Bitbucket.

Corenotes — Lead Engineer (Contract)

November 2021 – Present | Remote

- Lead engineering for Corenotes, a multi-tenant care-management platform covering client records, medication administration, tasks and daily care activities; own backend architecture, technical decisions and code quality.
- Plan, prioritise and delegate work to the frontend engineer, review deliverables and keep frontend and backend aligned; contribute directly to the React frontend.
- Partner with the cloud engineer on AWS infrastructure, deployments and environment configuration.
- Refactored scheduled task, medication and chore jobs into stateless multi-tenant workers using Promise.allSettled, so one tenant's failure no longer stops processing for the others.
- Built medication-discontinuation logging with PDF export, giving care staff a complete, printable audit trail.
- Added field-level AES-256 encryption for sensitive client identifiers, including Social Security and Medicaid numbers, strengthening protection of health information.
- Work with company leadership to turn product requirements into features, including the corenotes.app marketing site.

Technologies: Node.js, Express, MongoDB, Mongoose, React, AWS, JavaScript (ES modules), jsPDF.

AgeofAI — Backend Developer (Contract)

July 2025 – October 2025 | Remote · California, USA

- Developed server-side functionality, optimised database queries and caching, and implemented fixes and security patches to improve application reliability and performance.

Homefood — Full-Stack Developer
April 2024 – July 2025

- Developed responsive React interfaces and connected them to backend services built with Node.js.
- Wrote and maintained automated tests and documented API endpoints supporting frontend/backend communication.

FREELANCE / CONTRACT PROJECTS

Embassy Pharmaceutical and Chemicals Limited — Full-Stack Developer (Contract)
September 2026 | Remote

Designed and developed a prototype online ordering and inventory platform for a Nigerian pharmaceutical distribution company, enabling pharmacies to order directly and sales representatives to process orders at trade conferences.

- Translated stakeholder discussions into requirements and delivered a functional prototype for client testing.
- Built a pharmacy storefront supporting business registration, product browsing and order placement, plus an admin/sales console for inventory updates and order tracking.
- Designed conference ordering via shared links and QR codes, allowing orders when local stock showed zero and fulfilment from regional inventory.
- Supported reserve-and-pay at conference stands and bank-transfer payment workflows.
- Prototyped in React before rebuilding with lightweight HTML, CSS and JavaScript for simpler testing and deployment.

Technologies: React, JavaScript, HTML, CSS.

SELECTED PROJECTS

Roadlers — Rental platform built with React, Redux and Laravel.
Schoolexl — Education platform built with Next.js, Zustand and Laravel.
CareConnect — Web application built with Laravel.
GetSimfy — Web application built with Next.js and Redux.

EDUCATION

Bachelor of Science (BSc), Psychology
Obafemi Awolowo University, Ile-Ife, Nigeria | 2022

ADDITIONAL INFORMATION

Open to remote, hybrid and relocation opportunities. Professional focus: backend engineering, technical leadership, payment systems, third-party integrations, application security and scalable business applications.
